EXPERIENCE

FRONT END ENGINEER

Muck Rack: Sept 2019 - Present

Develops features such as dashboards, forms, email pitching, and user profiles
- Plans, develops, and maintains backend and frontend business logic
- Works asynchronously with a team of distributed product managers, engineers, and designers to deliver great quality features
- Applies functionality with performance and accessibility as a top priority

LEAD DEVELOPER

Square 205: Apr 2019 - March 2020

Led team in product scope, built front end applications and server side APIs
- Developed architecture and features for React and React Native apps
- Worked on Node services that communicate with the WordPress API and Bixolon Printer services
- Collaborated remotely with developers, designers, project managers, and clients to discuss product needs

FRONT END DEVELOPER

Sabre Hospitality Solutions: Sept 2017 - Apr 2019

Built User Interface components and websites for global hotel chains
- Created an autocomplete search and map view using React Hooks that allowed users to find and filter through over thousands of hotels
- Introduced modern tools such as Webpack, ESLint, Prettier, and testing in order to encourage high quality code

WEB DEVELOPER

Freelance: 2016 - 2017
Worked with WordPress, React, and front end build tools

PROJECTS

Muck Rack
SaaS built with Python Django, and Vue that helps PR professionals manage their relationships with Journalists

N-Abler
Small business website built with WordPress, React, and TypeScript to showcase equipment, including an autocomplete search and a results filter page

Eatzis's Market & Bakery
E-commerce food service website's REST API built with Node and Express that handled print jobs in stores as well as the admin dashboard built with PHP and WordPress for reporting

Upventur
React Native app for capturing experiences in the outdoors and organizing meetups with people of similar interests
